Basic SEO

Common Keywords

A list of keywords that appear frequently in the text of your content.

Here are the most common keywords we found on the page:

shivam vishwanaath tech fullstack lead case pinboard ubuntu verified direct

SEO Description

SEO analysis of your page's meta-description.

The meta description is 205 characters long. Most search engines truncate descriptions longer than 160 characters. Official portfolio and case docket of Shivam Vishwanaath — Tech Lead, Full-Stack Architect, and DevOps engineer specializing in high-concurrency web systems, Ubuntu VPS hosting, and production reliability.

Write a meta-description for your page. Use your target keyword(s) (in a natural way) and write with human readers in mind. Summarize the content - describe the topics your article discusses.

The description should stimulate reader interest and get them to click on the article. Think of it as a mini-advert for your content.

H1 Heading

SEO Analysis of the H1 Tags on your page.

One H1 tag was found on the page.

Shivam Vishwanaath

H2 Headings

SEO analysis of the H2 headings on your page.

One or more H2 tags were found on the page.

The Crime Investigation Board
Production Platforms Engineered by Shivam Vishwanaath
DevOps & Full-Stack Capabilities of Shivam Vishwanaath
Index of Case Files on Shivam Vishwanaath
Direct Dispatch & Verified Wire

Image ALT Attributes

SEO analysis of the "alt" attribute for image tags.

All images on the page have alt attributes.

Keywords in Title & Description

SEO analysis of the HTML page's Title and meta description content.

One or more common keywords were found in the title and description of the page.

title: shivam, vishwanaath, tech, lead
description: shivam, vishwanaath, tech, lead, case, ubuntu

Links Ratio

SEO analysis of the ratio of internal links to external links.

The page has a correct number of internal and external links.

internal: 15

external: 3

SEO Title

SEO analysis of the HTML title of the page.

The page title has 53 characters, which is good.

Shivam Vishwanaath | Tech Lead & Full-Stack Architect

Create a responsive site

Our analysis of the use of CSS media queries in your content.

The CSS code contains **media queries**.

Media query found in http://shivamvishwanaath.dev/_next/static/css/3e83fb7df4035872.css.

Homepage Is Reachable

Tests if your homepage is reachable by making an HTTP request.

Homepage is reachable

Advanced SEO

Search Preview

Here is how the site may appear in search results:

Shivam Vishwanaath | Tech Lead & Full-Stack Architect

<https://shivamvishwanaath.dev>

Official portfolio and case docket of Shivam Vishwanaath — Tech Lead, Full-Stack Architect, and DevOps engineer specializing in high-concurrency web systems, Ubuntu VPS hosting, and production reliability.

Canonical Tag

Does the content have a "canonical" URL?

The page is using the canonical link tag.

`https://shivamvishwanaath.dev`

Noindex Meta

Does the content contain a noindex robots meta tag?

The page contains the **index** meta tag or header.

Mobile Search Preview

Here is how the site may appear in search results on a mobile device:

Shivam Vishwanaath | Tech Lead & Full-Stack Architect

<https://shivamvishwanaath.dev>

Official portfolio and case docket of Shivam Vishwanaath — Tech Lead, Full-Stack Architect, and DevOps engineer specializing in high-concurrency web systems, Ubuntu VPS hosting, and production reliability.

Mobile Snapshot

A snapshot of how your content appears on a mobile device.

WWW Canonicalization

Does the site appear on more than one URL?

The www and non-www versions of the URL are not redirected to the same site.

Decide whether you want your site's URLs to include a "www", or if you prefer a plain domain name. There are [marketing pros and cons](#) for each choice, but neither one is better or worse for SEO purposes - as long as you're consistent.

You should use HTTP redirections (301 permanant redirects) to pass PageRank from the "wrong" URLs to the standard (canonical) ones. That way, your content will still benefit from backlinks if someone makes a mistake and uses the wrong URL.

OpenGraph Meta

Does your site use OpenGraph meta tags?

Opengraph meta tags have been found.

Schema Meta Data

Does the content include relevant Schema.org metadata?

Schema.org data has been found on the page.

Sitemaps

Does the site use an XML sitemap?

The site has one or more sitemaps.

Robots.txt

Does your site have a valid robots.txt file

The site has a robots.txt file. Try our [free robots.txt editor tool](#) to easily test and validate your robots.txt file.

Keep your content fresh

Checks for recent content updates using available signals (XML sitemap, og:updated_time, or Last-Modified header).

The content might be outdated. Last updated on 2025-08-20 (371 days ago) via XML Sitemap.

Keep your content updated. Use a CMS or plugin that automatically updates the XML sitemap or meta tags when you update your content, or configure your server to set the Last-Modified header correctly.

Broken Links

Detects broken or dead links (404/500 errors) in the website that may harm SEO and user trust.

No broken links on the page.

Performance

Page Size

An analysis of the size of your HTML file.

The size of the HTML document is 12 Kb, under the average HTML size of 33 Kb.

Response Time

How fast does your server respond to requests?

The response time of the page is 1.71 seconds. It is recommended to keep it equal to or below 0.8 seconds.

The simplest and fastest fix is to use a caching plugin, like [WP Rocket](#). Caching plugins keep a cached version of each page on your site. Instead of building the page from scratch, the server will send the cached copy.

You can get an even greater speed-up with a content delivery network service. These services host a cache of your content on multiple servers spread out across the globe. A user's request is handled by the edge server that's closest to their physical location, so the content arrives very fast indeed.

Image Headers Expire

Do your images use "expires" headers?

No local images found on the page

Minify CSS

Are your CSS files properly minified?

All CSS files appear to be minified.

Page Objects

Analysis of the embedded objects in the pages.

The page makes 12 requests.

total: 12
images: 1
javascript: 10

stylesheets: 1

Minify Javascript

Does the site use minified JavaScript?

All Javascript files appear to be minified.

Mobile Speed

How fast does your website respond to mobile users?

The page performance is good across all key metrics.

Security

Theme Visibility

Theme Visibility

The theme is not publicly visible, so it is not easily identifiable.

Visible Plugins

Visible Plugins

Hurray! None of the plugins are publicly visible.

Directory Listing

Does your web server list the contents of the directories?

Directory Listing seems to be disabled on the server.

Secure Connection

Is your content served over a secure connection?

The site is using a secure transfer protocol (https).
